SUMMARY

Computer Systems Engineer (UDLAP, 2026) with hands-on experience in data analysis, automation, and modeling. Built Power BI dashboards, data collection and conversion algorithms, and predictive models in Python (logistic regression, Kalman filters, OpenCV computer vision).

PROFESSIONAL EXPERIENCE

Club León FC · Data Analyst & Software Development Intern — Aug 2026 – Present

León, Mexico

- Building tools and automations for the scouting department that streamline prospect evaluation and comparison, reducing manual work for scouts.

Mitacs Globalink Research Internship · Research Intern — May – Aug 2026

Montreal, Canada

- Collecting data through web scraping and applying AI techniques to research problems at INRS (Montreal), under university faculty supervision.
- Professor's research project focused on predicting World Cup outcomes using Kalman filters (dynamic state estimation) on historical match data.

Piquero Technology and Sports · Software Developer Intern — Summer 2025

- Built a Q&A chatbot for a national swimming event (500+ attendees), automating FAQ responses and reducing staff workload.
- Designed a Python algorithm to automatically convert data between Hy-Tek (.hy3) and Excel, eliminating manual data entry and improving data accuracy.

RIANSA · Data Analyst Intern — Summer 2024

- Created and managed Power BI dashboards to visualize nationwide sales data, enabling faster reporting for the commercial team.
- Identified top-performing products and highest-volume client locations (oil wells), generating insights that directly informed sales strategy.

EDUCATION

B.S. Computer Systems Engineering — Graduated: May 2026

Universidad de las Américas Puebla (UDLAP) · Puebla, Mexico

KEY PROJECTS

Winner Way — AI Tennis Coach Platform

- Full-stack tennis analysis platform (React + Python + Flask) featuring an AI coach that analyzes player biomechanics and strategy from video.
- Implemented OpenCV for court keypoint detection and Dynamic Time Warping (DTW) algorithms for player movement analysis.

xG Prediction Model — Soccer Analytics

- Built and trained a Logistic Regression model (Scikit-learn + Pandas) to predict Expected Goals (xG) using 2022 FIFA World Cup data from StatsBomb.
- Achieved performance on par with industry-standard xG models, validating the approach against professional sports analytics benchmarks.

TECHNICAL SKILLS

Languages: Python, SQL **Data & AI:** Pandas, NumPy, Scikit-learn, OpenCV **Visualization:** Power BI, Matplotlib, Seaborn

Development: React, Flask, Streamlit, Git, GitHub **Databases:** SQL (relational databases)

CERTIFICATIONS

Business Metrics for Data-Driven Companies · Duke University / Coursera (2026)

Data Manipulation with Pandas · Joining Data with Pandas (DataCamp) | Data Visualization for BI · Pandas & NumPy (Platzi)
